

**Supported metal alkyl compound and its preparation****Abstract**

5   Pulverulent solid which consists essentially of at least one metal alkyl compound bound  
chemically and/or physically to a finely divided, porous, mechanically stable and chemically inert  
support, has a proportion by weight of metal alkyl compound of at least 5% by weight, based on  
the support, and has an angle of repose, determined in accordance with ISO 4324, of up to 48°.  
The solid allows trouble-free metering as active component into a reactor.
